VOLUME 157 SUBJECT INDEX

A

Acacia koa, ecophysiology of juvenile leaves 123
Achene dimorphism, Crepis sancta 309
Achene heteromorphism, Bidens pilosa 309
Agalinis neoscotica, mixed mating system 501
Agropyron spicatum, competition with Pinus ponderosa 509
Andropogon gerardi, in situ localization of NADP-malic enzyme 118
Apoptosis: megaspore abortion 1; Norway spruce somatic embryogenesis 8, 16
Apple see Malus domestica
Arabidopsis thaliana, reserve mobilization 280
Atriplex canescens, effect of CO_2 concentration 164
Avena fatua, germination physiology 153

B

Banksia: floral development 341, 373; interspecific hybridization 638; preferential outcrossing 615
Baptisia bracteata, ecophysiology 303
Bidens pilosa, achene heteromorphism 309
Bioassay, Hormosira banksii embryo 582
Biomechanics, Condylocarpon guainense growth habit 406
Botryosphaeria ribis, histopathology in Melaleuca quinquenervia 219
Brassica napus, histodifferentiation in embryogenesis 27
Butomus umbellatus, ovule, embryo sac, embryo, and endosperm development 269

C

Carpel development, Tasmannia insipida 698
Carpel orientation, Grevilleoideae 373
Caruncle development, Ricinus communis 40
Castanopsis cuspidata, germination and seedling survival 516
Chimera, periclinal, Rhizophora mangle 398
Clarkia tembloriensis, pollen germination and tube growth 228
Clarkia gracilis, success of alternative floral phenotypes 733
CO_2 concentration 164
Competition, Pinus ponderosa and Agropyron spicatum 509
Condylocarpon guianense, biomechanics of ontogeny and growth habit 406
Cotton see Gossypium hirsutum
Crassulacean acid metabolism, Portulaca 103
Crepis sancta, achene dimorphism 309
Crepis tectorum, phenotypic selection of plant height 488
Cycas pectinata, genetic structure and gene flow 468

D

Development: Arabidopsis thaliana reserve mobilization 280; Arundo formosana megasporogenesis and megagametogenesis 418; Brassica napus embryo 27; Butomus umbellatus ovule, embryo sac, embryo, and endosperm 269; Condylocarpon guianense growth habit 406; Dipsacales floral ontogeny 203; Equisetum telmateia architecture and ontogeny 567; Geranium robertianum pollen 180; Gnetales bisexual organ complexes S113; Gnetales double fertilization S77; Gnetales male reproductive structures S95; Grevilleoideae carpel orientations 373; Grevilleoideae inflorescence ontogeny 341; Hormosira banksii embryo 582; Lathyrus maritimus root nodules 432; megaspore abortion 1; Norway spruce embryogenesis 8, 16; Pelargonium ×hortorum somatic embryogenesis 440; Pistacia shell and embryo 586; Pisum sativum pinna morphology 659; plasmodesmata in Moricandia arvensis 685; Quercus suber secondary embryos 674; Rhizophora mangle periclinal chimeras 398; Rhizophora mangle wound periderm 63; Ricinus communis caruncle 40; Selaginella martensii meristems 180; Sesbania rostrata nodules 71; sink-to-source transition in Moricandia arvensis 262; sink-to-source transition in Zea mays 247; Syzygium cuminii embryo abortion 49; Tasmannia insipida carpel 698; Trichophaea spore ontogeny 595; Vitis vinifera seed development and abortion 703; Zea mays leaf heteroblasty 331
Dipsacales, floral ontogeny 180
Double fertilization, Gnetales S77

E

Ecology: Agalinis neoscotica mixed mating system 501; allocation to flowers in Silene latifolia 493; Bidens pilosa achene heteromorphism 309; Clarkia tembloriensis pollen germination and tube growth 228; Crepis sancta achene dimorphism 309; Crepis tectorum phenotypic selection on plant height 488; Enterolobium cyclocarpum genetic variation 234; oak germination and survival 516; Pinus ponderosa seedling establishment 509; salt marsh community seed banks 746; specialization hypothesis for phenotypic plasticity 484; Zamia population structure 605
Ecophysiology: Acacia koa leaves 123; effect of substrate salintiy 164; elevated CO_2 concentrations 171; Portulaca CAM 103; prairie forbs 303; Quercus douglasii 123
Elymus: genome analysis 136; karyotype variation 142
Elymus hoffmanni sp. nov., cytology and morphology 750
Embryo abortion: Syzygium cuminii 49; Vitis vinifera 703
Embryo development: Arundo formosana 418; Brassica napus 27; Butomus umbellatus 269; Hormosira banksii 582; Lycopersicon esculentum 554; Norway spruce 8, 16; Pelargonium ×hortorum 440; Pinus strobus 453; Pistacia 586; Quercus suber 674
Enterolobium cyclocarpum, genetic variation and differentiation 234
Enzyme localization: carbon metabolism 525; glycine decarboxylase 539; NADP-malic enzyme 118
Equisetum telmateia, architecture and ontogeny 567
Eragrostis, cytogenetic relationships 632

F

Floral ontogeny, Dipsacales 203
Forbs, prairie ecophysiology 303

G

Genetics: Banksia interspecific hybridization 638; Cycas pectinata complex genetic structure 468; Elymus genome analysis 136; Elymus karyotype 136; Enterolobium cyclocarpum population variation 234; Eragrostis cytogenetic relationships 632; genes encoding 11S-globulin-like proteins in Pinus strobus 453; megaspore abortion 1; Microbotryum violaceum electrophoretic karyotypes 447; nuclear ribosomal DNA variation 296; regulation of Zea mays leaf heteroblasty 331; Rhizophora mangle periclinal chimeras 398; Ustilago violacea insertional mutations 462
Genetic variation: Enterolobium cyclocarpum 234; Simmondsia chinensis 296
Geranium robertianum, pollen development 180
Germination: Avena fatua 153; Castanopsis cuspidata 516; evergreen oak 516
Gnetales S1, S3, S40, S50, S58, S77, S95, S113
Gossypium hirsutum, fiber attachment to seed coat 92
Grevilleoideae: developmental basis of diverse carpel orientations 373; inflorescence ontogeny and organogenesis 341

H

Heat stress proteins, Zea mays 546
Helianthus annuus: ecophysiology 303; effect of drought stress 729
Heteroblasty, leaf, Zea mays 331
Histodifferentiation, Brassica napus embryo 27
Histopathology, Botryosphaeria ribis 219
Hormosira banksii, developing embryos and marine bioassay system 582

I

Inflorescence ontogeny, Grevilleoideae 341
Interspecific hybridization, Banksia 638
Iridaceae 523

J

Jasmonic acid, effects on Lycopersicon esculentum roots 713
Jojoba see Simmondsia chinensis

L

Lathyrus maritimus, root nodule storage organelles 432
Lycopersicon esculentum: 6-benzyladenine-induced embryogenesis 554; effects of jasmonic acid on roots 713

M

Malus domestica, sieve-element wall 80
Mating system, mixed, Agalinis neoscotica 501
Megaspore abortion 1
Megasporogenesis and megagametogenesis, Arundo formosana 418
Melaleuca quinquenervia, biocontrol 219
Meristem development, Selaginella martensii 180
Microbotryum violaceum, electrophoretic karyotype 447
Microspore-derived embryos, Brassica napus 27
Moricandia arvensis: development of specialized plasmodesmata 685; sink-to-source transition 262

N

Nodule: root, Lathyrus maritimus 432; Sesbania rostrata 71
Norway spruce, apoptosis in somatic embryogenesis 8, 16

O

Opuntia ficus-indica, shading, osmoticum, and hormone effects on organ development 722
Outcrossing, preferential, Banksia 615

P

Palaeocarpinus aspinosa sp. nov., Paleocene 644
Palaeocarpinus (extinct Betulaceae), from northwestern China 240
Paleobotany: early Pleistocene closed-cone pine forest 323; Gnetales S50; Palaeocarpinus aspinosa sp. nov. 644; Palaeocarpinus from northwestern China 240
Parthenogenesis, Norway spruce 8, 16
Pelargonium ×hortorum, thidiazuron-induced somatic embryogenesis 440
Phenotypic selection, Crepis tectorum 488
Phenotypic selection on plant height, Crepis tectorum 488
Phylogeny, seed plant S3
Physiology: Avena fatua germination 153; effect of jasmonic acid on Lycopersicon esculentum roots 713; heat stress in Zea mays 546; Helianthus annuus drought tolerance 729; Lycopersicon esculentum 6-benzyladenine-induced embryogenesis 554; NADP-malic enzyme localization 103; Opuntia ficus-indica organ development 722; Pisum sativum enzymes of carbon metabolism 525; Pisum sativum glycine decarboxylase complex 539; salt tolerance in wheat 103; Solanum tuberosum in vitro pollen germination 561; sucrose metabolism in Sorghum stalk 159
Picea abies: apoptosis in early embryogenesis 8; protein ubiquination in early embryogenesis 16
Pinus ponderosa, seedling establishment 509
Pinus strobus, megagametophyte expression of 11S-globulin-like proteins 453
Pistacia, shell structure and embryo development 586
Pisum sativum: control of pinna morphology 659; enzymes of carbon metabolism 525; proteins of the glycine decarboxylase complex 539
Plant-microbe interaction: biocontrol of Melaleuca quinquenervia 219; MLO-infected apple 80; Rhizophora mangle wound periderm 63; Schizaea pusilla fern gametophyte 53; Sesbania rostrata nodules 71
Plasmodesmata, development: Moricandia arvensis 685; Zea mays 247
Plastochron index, Moricandia arvensis 262
Pollen development, Geranium robertianum 180
Pollen germination and tube growth: Clarkia tembloriensis 228; Solanum tuberosum 561
Population stucture: Cycas pectinata 468; Zamia 605
Portulaca, CAM 103
Potato see Solanum tuberosum
Protein ubiquination, Norway spruce somatic embryogenesis 16

Q

Quercus douglasii, role of root architecture 129
Quercus gilva, germination and seedling survival 516
Quercus suber, origin and early development of secondary embryos 674

R

Reproductive biology: Agalinis neoscotica mixed mating system 501; Banksia preferential outcrossing 615; Clarkia gracilis alternative floral phenotypes 733; Clarkia tembloriensis pollen germination and tube growth 228; Silene latifolia, allocation to flowers 493; Spergularia marina floral traits 621
Reserve mobilization, Arabidopsis thaliana 280
Rhizophora mangle: periclinal chimeras 398; wound periderm formation 63
Ricinus communis: caruncle development 40; explosive anther dehiscence 739

S

Salinity tolerance: Helianthus annuus 729, wheat 103
Salt marsh communities, similarity of seed banks to aboveground vegetation 746
Scaevola sericea, photosynthetic response to salinity 171
Schizachyrium scoparium: effect of CO_2 concentration 164; in situ localization of NADP-malic enzyme 118
Schizaea pusilla, fungi-gametophyte relationship 53
Seedling establishment: oak 516; Pinus ponderosa 509
Seed plant phylogeny S3
Selaginella martensii, meristem development 180
Sesbania rostrata, nodule differentiation 71
Silene latifolia, allocation to flowers 493
Simmondsia chinensis, nuclear ribosomal DNA unit length variation 296
Sink-to-source transition: Moricandia arvensis 262; Zea mays 247
Solanum tuberosum, pollen germination and tube growth 561
Somatic embryogenesis, Pelargonium ×hortorum 440
Sorghum, sucrose metabolism 153
Specialization hypothesis for phenotypic plasticity 484
Spergularia marina, floral traits 621
Spore ontogeny, Trichophaea 595
Structure: cotton fiber attachment 92; Gnetales wood, bark, and stem anatomy S58; Ricinus communis anther cell wall modification 739
Sunflower see Helianthus annuus
Systematics: Cycas pectinata complex 468; Dipsacales floral ontogeny 203; Elymus genome analysis 136; Elymus hoffmanni sp. nov. 750; Eragrostis cytogenetic relationships 632; Gnetales S3, S40; Grevilleoideae 341, 373; South American Elymus 142
Syzygium cuminii, embryo abortion 49

T

Tasmannia insipida, carpel development 698
Trichophaea, ultrastructure of spore ontogeny 595
Triticum aestivum, salinity stress 110

U

Ubiquination, Norway spruce somatic embryogenesis 16
Ustilago violacea, insertional mutations 462

V

Vitis vinifera, seed development and abortion 703

W

Wheat see Triticum aestivum
Wound periderm, Rhizophora mangle 63

Z

Zamia, population structure 605
Zea mays: effect of CO_2 concentration 164; effect of heat stress 546; leaf heteroblasty 331; sink-to-source transition 247
